Scope Version History

Document Version	Sent On	Notes
v1.0	06/18/2026	

1. Introduction

1.1 Purpose

The purpose of this document is to present a detailed description of the features that will be added to the web application. It will explain the purpose and features, interfaces, business process workflow of the features added in the web, what the system will do, the constraints under which it must operate, and how the system will react to the data generated. This document is intended for both the stakeholders and the developers of the system and will be proposed to the client and development team for approval.

1.2. Scope

The scope of this project includes the design and development of a B2B eCommerce website for ESM Products, enabling customers to browse PPE products, manage accounts, place orders, make secure payments, track orders, and access customer-specific pricing. The platform will include comprehensive administrative capabilities for managing products,

categories, product variants, customer-specific pricing, orders, shipping, content pages, reports, revenue tracking, and customer inquiries, providing a centralized solution for managing ESM Products' online sales and operations.

1.3. Glossary

Term	Definition
Scope of Work	A document that completely describes all of the functions of a proposed application and the constraints under which it must operate
Stakeholder	Any person with an interest in the project who is not a developer
Actor	End User Website, Admin Panel

2. Business Process Requirements Specification

This section outlines the business process features for each of the users separately.

Types of User Roles:

1st level users: End User

2nd level users: Admin

2.1 User Classes and Characteristics

User Characteristics	User Classes
Website • Homepage • Product • Categories Page • Cart • Checkout • Signup / Login • My Orders • Address	End User

• Profile • About Us • FAQ • Contact Us • Terms and Conditions • Privacy Policy • News Bulletin	
Web Panel • Admin Dashboard • User Management • User Specific Discount Pricing • Product Category Management • Product Management • Order Management • Report And Analytics • Revenue • CMS ○ About Us ○ News Bulletin ○ FAQ ○ TnC ○ Privacy Policy • Contact Us Queries • Profile	Admin

2.2 Technology Stack

Browser Compatibility for Web App	OS Compatibility for Web App
---	--

All latest versions of Firefox, Chrome & Safari are supported; Internet Explorer is not supported	MS Windows, Linux, Mac
---	------------------------

Is the design to be provided by the Client	No
Is an Android native app required	Not Applicable
Is an iOS native app required	Not Applicable
Android OS versions supported	Not Applicable
iOS versions supported	Not Applicable
Mobile app orientation	Not Applicable
Is Cross platform app required (like Phonegap, Ionic, React Native etc.)	Not Applicable
Framework	Frontend: React, Backend: Node
Programming Language	Frontend: JavaScript (React) Backend: JavaScript (Node)
Android app screen resolution supported	Not Applicable

iOS app screen resolution supported	Not Applicable
Mobile app: Is Web Service to be provided by Inheritx solution	Not Applicable
For the Android app – uploading on Google Play Store needs to be provided by Inheritx solution on the client's provided account.	Not Applicable
For the iOS app, uploading to Apple iTunes store needs to be provided by Inheritx solution on the client's provided account.	Not Applicable
Will the apps work offline?	Not Applicable
Will the apps have dark mode support?	Not Applicable

3. End User Website

3.1 Homepage

- The Home Page will be the landing screen of the platform. It displays introductory information about the ESM Products. Homepage information would be provided by the client.

3.2 Guest User / End User

- Guest users can traverse through all the web pages and place orders without account creation.
- Users can also sign up on the platform and place the orders. (Features for the end users are listed in [section 4](#)).

3.3 Product Page

- The following items will be shown on this screen:
 - **Global Search Bar:**
 - Search products by name, categories or any keyword related to the products.
 - Auto-suggestions while typing.
 - **Sort By:** Sort the list of the product on following parameters.
 - **Price (High to Low):** Product list can be sorted on the basis of price (high to low).
 - **Price (Low to High):** Product list can be sorted on the basis of price (low to high).
 - **Name (A to Z):** Product list can be sorted on the basis of product name. (A to Z).
 - **Name (Z to A):** Product list can be sorted on the basis of product name. (Z to A).
 - **Filters**
 - Category
 - Price Range
 - **List view:** User can toggle the view of the list to
 - List View
 - Grid View
 - **List of products:** List of all the products would be shown with pagination, searching and sorting functionality. Following details would be shown per product.
 - **Product Image:** Label, Primary image of the product
 - **Product name:** Label, Name of the product.
 - **Product category:** Label, Category of the product.
 - **Product Description:** Label, Details of the product (up to 100 characters).
 - **Product Price:** Label, Price of the product.
 - **View Details:** Button, clicking upon the button users would be redirected to the detail page of the product.
 - **Detailed Page:** Following information would be shown on the detailed page of the product.
 - **Product Images:** (A carousel to showcase multiple images).
 - Users can click upon the image to view the enlarged image.

- Zoom In / Zoom out functionality would be provided to view the image.
- **Product name:** Label, Name of the product
- **SKU Code:** Label, SKU code of the product.
- **Product Category:** Label, Category linked with product.
- **Product Price:** Label, Price of the product
- **Product Description:** Label, Details of the product.
- **Product Available Variation**
 - **Color:** The user can choose a preferred color from the available product options.
 - **Size:** The user can choose a preferred size from the available product options.
 - **Style:** The user can choose a preferred style from the available product options.
 - **Carton Size:** The user can choose a preferred Carton size from the available product options.
 - **Note:** Color, Size, Style and Carton Size selection may vary depending upon how the admin had configured the product.
 - **Out of stock:** Label, In case the product variation is not available, then out of stock mark label would be shown to the user.
- **Quantity:** Button, User can increase / decrease the quantity of the products for purchase.
- **Add to Cart:** Button, Clicking upon this the product variation would be added to cart and button would change to 'Go to Cart'
- **Go to Cart:** Button, Clicking upon this the product user would be redirected to the 'Cart' page.

3.4 Categories Page

- The following items will be shown on this screen:
 - **Global Search Bar:**
 - Search categories by name or any keyword related to the categories.
 - **List of categories:** List / grid of all the categories would be shown with pagination, searching and sorting functionality. Following details would be shown per categories.

 - Clicking upon the category grid card users would be redirected to the list of the product linked to the category.
 - **Category linked products:** List of products linked to the category would be shown here.
 - **Global Search Bar:**

- Search products by name or any keyword related to the products.
 - Auto-suggestions while typing.
- **Sort By:** Sort the list of the product on following parameters.
 - **Price (High to Low):** Product list can be sorted on the basis of price (high to low).
 - **Price (Low to High):** Product list can be sorted on the basis of price (low to high).
 - **Name (A to Z):** Product list can be sorted on the basis of product name. (A to Z).
 - **Name (Z to A):** Product list can be sorted on the basis of product name. (Z to A).
- **List view:** User can toggle the view of the list to
 - List View
 - Grid View
- **List of products:** List of all the products would be shown with pagination, searching and sorting functionality. Following details would be shown per product.
 - **Product Image:** Label, Primary image of the product
 - **Product name:** Label, Name of the product.
 - **Product category:** Label, Category of the product.
 - **Product Description:** Label, Details of the product (up to 100 characters).
 - **Product Price:** Label, Price of the product.
 - **View Details:** Button, clicking upon the button users would be redirected to the detail page of the product.
- **Detailed Page:** Following information would be shown on the detailed page of the product.
 - **Product Images:** (A carousel to showcase multiple images).
 - Users can click upon the image to view the enlarged image.
 - Zoom In / Zoom out functionality would be provided to view the image.
 - **Product name:** Label, Name of the product
 - **SKU Code:** Label, SKU code of the product.
 - **Product Category:** Label, Category linked with product.
 - **Product Price:** Label, Price of the product
 - **Product Description:** Label, Details of the product.
 - **Product Available Variation**
 - **Color:** The user can choose a preferred color from the available product options.
 - **Size:** The user can choose a preferred size from the available product options.

- **Style:** The user can choose a preferred style from the available product options.
- **Carton Size:** The user can choose a preferred Carton size from the available product options.
- **Note:** Color, Size, Style and Carton Size selection may vary depending upon how admin had configured the product.
- **Out of stock:** Label, In case the product variation is not available, then out of stock mark label would be shown to the user.
- **Quantity:** Button, User can increase / decrease the quantity of the products for purchase.
- **Add to Cart:** Button, Clicking upon this the product variation would be added to cart and button would change to 'Go to Cart'
- **Go to Cart:** Button, Clicking upon this the product user would be redirected to the 'Cart' page.

3.5 Shopping Cart

- The following items will be shown on this screen:
 - In case when no items had been added in the cart.
 - **Explore Products:** Button, clicking upon this user would be redirected to the product page.
 - Following details would be shown when the user had added items for purchase.
 - **List of cart items:** A scrollable list view for all the products which had been added in the cart with following details.
 - **Product Image:** Label, Primary image of the product
 - **Product name:** Label, Name of the product.
 - **Product category:** Label, Category of the product.
 - **Product Style:** Label, Style of the product (if applicable).
 - **Product Color:** Label, color of the product (if applicable).
 - **Product Size:** Label, size of the product (if applicable).
 - **Carton Size:** Label, Carton size of the product (if applicable).
 - **Product Quantity:** Button, Plus and Minus (+ & -) buttons will be there, users can tap on this to increase or decrease the quantity.
 - **Price:** Label. Price of the product (Quantity * Price of the product)
 - **Remove:** Button, clicking upon this item would be removed from the cart upon confirmation.
 - **Proceed to checkout:** Button, clicking upon this user would be redirected to the checkout screen.

3.6 Checkout

 - **Current Password:** This will be a textbox. The user can enter the current password.
 - **New Password:** This will be a mandatory textbox. The user must include the following in the new password -
 - At least 1 uppercase character.
 - At least 1 lowercase character.
 - At least 1 number.
 - At least 1 symbol.
 - Minimum 8 characters.
 - **Confirm New Password:** This will be a mandatory textbox. The user must include the following in the new password -
 - At least 1 uppercase character.
 - At least 1 lowercase character.
 - At least 1 number.
 - At least 1 symbol.
 - Minimum 8 characters.
 - The password added here must match the new password added in the field above.

4.13 Contact Us (For both guest and logged in users)

- Prefilled with user in case logged in (first name and last name), email address. Users need to provide a topic (dropdown having static values) to provide the queries.
- The notes field will be shown here, where the user can add comments.
- Once added, an email will be sent to the admin with the details that the user added.
- **Note:** All feedback submissions across the platform will be stored in a single centralized feedback database.

4.14 Notifications

- This user will get the following notifications:
 - **Email Notifications:** The following email notifications will be sent to this user:
 - **User (Guest User)**
 - Order confirmation
 - Payment confirmation
 - Order tracking link (When updated from admin side)
 - Query raised via 'Contact Us' form
 - **User (Logged In)**
 - Account created
 - Account verification
 - Forgot Password
 - Query raised via 'Contact Us' form
 - Password reset
 - Order confirmation
 - Order tracking link (When updated from admin side)
 - Payment confirmation
 - Account created
 - Account verification
 - Forgot Password
 - Query raised via 'Contact Us' form

5. Super Admin Functionality

5.1 Login

- The admin can log in by -
 - **Email Address:** This will be a mandatory textbox, with email address-related validations.
 - **Password:** This will be a mandatory textbox field, with password-related validations.

5.2 Forgot Password

- If the admin has forgotten the password, then he/she can click on the 'Forgot Password' option from the Login screen.
- The admin will then be asked to input their email id to receive the link to reset the password. On clicking the link from the email, the user will be navigated to a webview where he/she will be able to set a new password.
- On clicking the link, a page will open in a webview, which will have the following options :
 - **New Password:** This will be a mandatory textbox. The admin must include the following in the new password -
 - At least 1 uppercase character.
 - At least 1 lowercase character.
 - At least 1 number.
 - At least 1 symbol.
 - Minimum 8 characters.
 - **Confirm New Password:** This will be a mandatory textbox. The admin must include the following in the new password -
 - At least 1 uppercase character.
 - At least 1 lowercase character.
 - At least 1 number.
 - At least 1 symbol.
 - Minimum 8 characters.
 - **Reset:** This will be a button, and clicking on it will save the new password.

5.3 Navigation Panel

- The following options will be shown in the app Navigation Panel. Users can navigate to the various sections from here.
 - **Admin Dashboard:** This will take the user to the 'Admin Dashboard' screen.
 - **User Management:** This will take the user to the 'User Management' screen.
 - **User Specific Discount Pricing:** This will take the user to the 'User Specific Discount Pricing' screen.
 - **Product Category Management:** This will take the user to the 'Product Category Management' screen
 - **Product Management:** This will take the user to the 'Product Management' screen.
 - **Orders Management:** This will take the user to the 'Orders Management' screen
 - **Report and Analytics:** This will take the user to the 'Report and Analytics' screen.
 - **Revenue:** This will take the user to the 'Revenue' screen
 - **CMS Management:** This will take the user to the 'CMS Management' screen.
 - **Profile:** This will take the user to the 'Profile' screen.
 - **Contact Us Queries:** This will take the user to the 'Contact Us Query' page.

- **Logout:** This will log the user out of the app.

5.4 Navigation Panel >> Admin Dashboard

- The following text stats will be shown on the dashboard -
 - **Stats:** The following stats would be displayed on the screen.
 - **Total Users in the system:** A label with a count will be shown here. When the admin clicks on this, the admin will be taken to the end user list.
 - **Active Order:** A label with a count will be shown here. When the admin clicks on this, the admin will be taken to the Order management page.
 - **Total Revenue:** A label with a count will be shown here. When the admin clicks on this, the admin will be taken to the Revenue page.
 - **Trending Products this month (Name & Category):** A label with a product name and category will be shown here.

5.5 Navigation Panel >> User Management

- **User Management:** This module allows the Admin to manage all users on the platform.
 - **List:** All the users who had signed up on the platform will be shown here in a list with pagination, searching and sorting functionality.
 - **Searching:** The admin can search the user details by user name, email ID or business/company name or keyword linked to the user.
 - **Sorting:** Sorting options will be provided in these fields -
 - Latest to oldest by created date
 - Oldest to latest by create date
 - **Export:** The admin can export the end users list in a spreadsheet.
 - Following things would be shown in list format.
 - **Name:** The name of the user (first name + last name) would be shown here.
 - **Business / Company Name:** The business / company name would be shown here.
 - **User email id:** Email id of the user would be shown here.
 - **Phone Number:** Phone number of the user would be shown here.
 - **User signed up date:** Date on which the user signed up.
 - **User status:** Current status of the user. (Active / Inactive).
 - **Action Buttons:** Following action button would be shown.
 - **View Details:** Button, clicking upon this “View Details” modal would open. Following information would be displayed here.
 - **User ID:** Label
 - **Profile Photo:** Label, Profile photo of the user.
 - **First Name:** Label
 - **Last Name:** Label

- **Business / Company Name:** Label
- **Email Id:** Label
- **Phone Number:** Label
- **Joined Date:** Label
- **Last Login:** Label
- **User account status:** Label
- **Close:** Button, clicking upon this the modal would close.
- **Activate/ Deactivate:** Button, clicking upon this a confirmation would get open. After the admin confirmation the user account would be activated / deactivated.

5.6 Navigation Panel >> User Specific Price Configuration

- **User Specific Price Configuration:** This module allows the Admin to manage all users specific price configuration for all the active products (i.e., all the active products and its variations) on the platform.
 - **List:** All the active users on the platform will be shown here in a list with pagination, searching and sorting functionality.
 - **Searching:** The admin can search the user details by user name, email ID or business/company name or keyword linked to the user.
 - **Sorting:** Sorting options will be provided in these fields -
 - Name
 - Company Name
 - Revenue
 - Email Address
 - Following things would be shown in list format.
 - **Name:** The name of the user (first name + last name) would be shown here.
 - **Company Name:** Displays the company/business name associated with the User.
 - **Email Address:** Displays the User's registered email address.
 - **Mobile Number:** Displays the user's registered mobile number.
 - **Account Status:** Displays whether the User account is Active or Inactive.
 - **Last Updated Date:** Displays the latest modification date related to User pricing.
 - **Revenue Generated:** Revenue generated from the user orders.
 - **Actions:** Following actions can be taken per list item.
 - **Manage user pricing:** Clicking upon this a modal / page would open that would consist of following details.
 - **User Details:**
 - **User Details** would be shown as label
 - **User Name:** Displays the name of the User.

- **Company Name:** Displays the company/business name associated with the User
- **Email Address:** Displays the User's registered email address.
- **Mobile Number:** Displays the user's registered mobile number.
- **Product Listing:** System will display all products and its variations available on the platform with the following details:
 - **Product Name:** Displays the product name.
 - **SKU Code:** Displays the product SKU.
 - **Product Category:** Displays the category associated with the product.
 - **Product Style:** Style of the product (if applicable).
 - **Product Color:** Color of the product (if applicable).
 - **Product Size:** Size of the product (if applicable).
 - **Carton Size:** Carton size of the product (if applicable).

 - **Custom User Price:** Textbox where Admin can define a User-specific price for the product.
 - **Note:** Users can set the price of products and its variations and save it to make the custom pricing for the user live on the platform.
 - Custom user specific prices defined in this module for the user would override the normal pricing of the products and its variants.
- **Reset To Standard Pricing:** Users can reset the pricing of products to the default standard product pricing.
 - **Default Pricing:** Pricing of the product set on the product management.
- **Bulk Pricing Import:** Upload Excel File, Admin can upload an Excel (.xlsx) file containing User-specific product pricing.
- **Download Sample Template:** Admin can download a predefined Excel template to populate pricing data in the required format.

5. 7Navigation Panel >> Product Category Management

- **Product Category Management:** This module allows the Admin to manage all product categories on the platform. Following details would be displayed here.
- **Create Product Category:** Button, clicking upon this user would be redirected to a new page where users need to provide following information to create a product category.
 - **Category Title:** Textbox, Mandatory, Title of the category.
 - **Category Image:** Imagepicker, Mandatory, banner image of the category.
 - **Category Description:** Mandatory, Description of the category.

- **List:** All the categories which have been created will be shown here in a list with pagination, searching and sorting functionality.
- **Searching:** The admin can search the user details by category title.
- **Sorting:** Sorting options will be provided in these fields -
 - Latest to oldest by created date
 - Oldest to latest by create date
- Following things would be shown in list format.
 - **Category Title:** Label
 - **Category Image:** Label
 - **Category Description:** Label (up to 100 char)
 - **Created Date:** Label
 - **Category status:** Current status of the blog. (Active / Inactive)
 - **Action Buttons:** Following action buttons would be shown per product category.
 - **Edit Details:** Button, clicking upon this user can edit the details of the category.
 - All the details would be prefilled with the existing user details.
 - **Category Title:** Textbox, Mandatory, Title of the category.
 - **Category Image:** Imagepicker, Mandatory, banner image of the category.
 - **Category Description:** Mandatory, Description of the category.
 - **View Details:** Button, clicking upon this “View Details” modal would open. Following information would be displayed here.
 - **Category Title:** Label
 - **Category Image:** Label
 - **Category Description:** Label
 - **Created Date:** Label
 - **Category status:** Current status of the blog. (Active / Inactive)
 - **Activate/ Deactivate:** Button, clicking upon this a confirmation modal would open, upon confirmation the product category would be activated/deactivated.
 - **Note:** Deactivating the category would make all the products listed under the category deactivated. (Warning message would be shown to the admin).

5.8 Navigation Panel >> Product Management

- **Product Management:** This module allows the Admin to manage all products on the platform. Following details would be displayed here.
- **Add Product:** Button, clicking upon this a modal would open where the admin needs to provide following information to add the product.
 - **Product Name:** Textbox, Mandatory, Admin can enter the name of the product.
 - **SKU Code:** Textbox, Mandatory, Admin can enter a unique SKU code for inventory and product identification.

- **Auto SKU Generation:** System can generate SKU codes automatically based on predefined rules. (Client would confirm the predefined rules).
- **Product Category:** Dropdown, Admin can select the category under which the product will be displayed.
- **Product Price (Base Price):** Textbox, Mandatory, Admin can define the default/base price of the product.
- **Product Description:** Textbox, Mandatory, Admin can add detailed product information, specifications, and usage details.
- **Featured Product:** Admin can mark the product as featured to showcase it on the homepage or category pages.
- **Product Images Section:**
 - **Product Image Upload:** Admin can upload one or multiple product images. (Size up to: 10 MB for each image, min: 1 image, max: 15 images).
 - **Image Reordering:** Admin can rearrange the sequence of uploaded images.
 - **Primary Image Selection:** Admin can select the default image that will appear in product listings.
 - **Image Preview:** Admin can preview uploaded images before saving.
 - **Image Delete Functionality:** Admin can remove unwanted images.
- **Product Variant Management Section**
 - **Color Management**
 - **Add Color Option:** Admin can add one or multiple color options available for the product.
 - **Edit Color Option:** Admin can modify existing color options.
 - **Delete Color Option:** Admin can remove color options.
 - **Color Status:** Admin can enable or disable specific colors.
 - **Size Management**
 - **Add Size Option:** Admin can add one or multiple size options available for the product.
 - **Edit Size Option:** Admin can modify existing size options.
 - **Delete Size Option:** Admin can remove size options.
 - **Size Status:** Admin can enable or disable specific sizes.
 - **Style Management**
 - **Add Style Option:** Admin can add different styles available for the product.
 - **Edit Style Option:** Admin can modify style information.
 - **Delete Style Option:** Admin can remove style options.
 - **Style Status:** Admin can enable or disable specific styles.
 - **Carton Size Management**
 - **Add Carton Size Option:** Admin can define different carton packaging sizes available for the product.
 - **Edit Carton Size Option:** Admin can modify carton size information.

- **Delete Carton Size Option:** Admin can remove carton size options.
- **Carton Size Status:** Admin can enable or disable carton size options.
- **Note:** It is not mandatory to add variants (color, size, style and Carton size) for the product. If no variant is added then the product details would be shown to the user without any variation selection.
- **Variant Matrix Generation:** System will automatically generate all possible combinations based on selected Color, Size, Style, and Carton Size values.
 - **Variant Price Configuration:** Admin can define a unique price for each variant combination.

 - **Mark Out Of Stock / Remove Variant:** Toggle, Admin can mark the variant as out of stock in case the variant is not in stock or does not exist. (This type of product variant can not be selected on the end user side and would be disabled).
- **List:** All the products added will be shown here in a list, with pagination, searching, and sorting functionality.
- **Searching:** The admin can search the product by product name, category, or any key words related to product.
- **Sorting:** Sorting options will be provided in these fields -
 - Latest to oldest by created date
 - Oldest to latest by create date
 - Base price
 - Number of variants
- Following things would be shown in list format.
 - **Product Image:** Label, Thumbnail image preview of the product.
 - **Product Name:** Label, Name of the product.
 - **SKU Code:** Label, Product SKU identifier.
 - **Category:** Label, Assigned product category.
 - **Base Price:** Label, Default product price.
 - **Total Variants:** Label, Number of configured variant combinations.
 - **Product Status:** Label, Active/Inactive status.
 - **Last Updated Date:** Label, Latest modification timestamp.
 - **Action Buttons:** Following action button would be shown per banner.
 - **Edit Details:** Button, clicking upon this user can edit the details of the product.
 - All the details would be prefilled with the existing user details.
 - **Product Name:** Textbox, Mandatory, Admin can enter the name of the product.
 - **SKU Code:** Textbox, Mandatory, Admin can enter a unique SKU code for inventory and product identification.

- **Auto SKU Generation:** System can generate SKU codes automatically based on predefined rules. (Client would confirm the predefined rules).
- **Product Category:** Dropdown, Admin can select the category under which the product will be displayed.
- **Product Price (Base Price):** Textbox, Mandatory, Admin can define the default/base price of the product.
- **Product Description:** Textbox, Mandatory, Admin can add detailed product information, specifications, and usage details.
- **Featured Product:** Admin can mark the product as featured to showcase it on the homepage or category pages.
- **Product Images Section:**
 - **Product Image Upload:** Admin can upload one or multiple product images. (**Size up to:** 10 MB for each image, **min:** 1 image, **max:** 15 images).
 - **Image Reordering:** Admin can rearrange the sequence of uploaded images.
 - **Primary Image Selection:** Admin can select the default image that will appear in product listings.
 - **Image Preview:** Admin can preview uploaded images before saving.
 - **Image Delete Functionality:** Admin can remove unwanted images.
- **Product Variant Management Section**
 - **Color Management**
 - **Add Color Option:** Admin can add one or multiple color options available for the product.
 - **Edit Color Option:** Admin can modify existing color options.
 - **Delete Color Option:** Admin can remove color options.
 - **Color Status:** Admin can enable or disable specific colors.
 - **Size Management**
 - **Add Size Option:** Admin can add one or multiple size options available for the product.
 - **Edit Size Option:** Admin can modify existing size options.
 - **Delete Size Option:** Admin can remove size options.
 - **Size Status:** Admin can enable or disable specific sizes.
 - **Style Management**

- **Add Style Option:** Admin can add different styles available for the product.
- **Edit Style Option:** Admin can modify style information.
- **Delete Style Option:** Admin can remove style options.
- **Style Status:** Admin can enable or disable specific styles.
- **Carton Size Management**
 - **Add Carton Size Option:** Admin can define different carton packaging sizes available for the product.
 - **Edit Carton Size Option:** Admin can modify carton size information.
 - **Delete Carton Size Option:** Admin can remove carton size options.
 - **Carton Size Status:** Admin can enable or disable carton size options.
- **Note:** It is not mandatory to add variants (color, size, style and Carton size) for the product. If no variant is added then the product details would be shown to the user without any variation selection.
- **Variant Matrix Generation:** System will automatically generate all possible combinations based on selected Color, Size, Style, and Carton Size values.
 - **Variant Price Configuration:** Admin can define a unique price for each variant combination.
 - **Default Price Inheritance:** Variant combinations can inherit the base product price if no custom price is configured.
 - **Mark Out Of Stock / Remove Variant:** Toggle, Admin can mark the variant as out of stock in case the variant is not in stock or does not exist. (This type of product variant can not be selected on the end user side and would be disabled).
- **View Details:** Button, clicking upon this “View Details” modal would open and product details would be displayed as a label.
- **Activate/ Deactivate:** Button, clicking upon this a confirmation modal would open, upon confirmation the product would be activated / deactivated.
 - **Note:** Deactivating the product, will deactivate all the product variants.
- **Delete Product:** Button, clicking upon this user can delete the product details upon confirmation.

- **Manage Product variants:** Button, clicking upon this user can manage the product variants.
 - List of all the product variants would be displayed here with configured pricing details added at the time of creating the product.
 - **Variant Price Configuration:** Admin can define a unique price for each variant combination.
 - **Default Price Inheritance:** Variant combinations can inherit the base product price if no custom price is configured.
 - **Mark Out Of Stock / Remove Variant:** Toggle, Admin can mark the variant as out of stock in case the variant is not in stock or does not exist. (This type of product variant can not be selected on the end user side and would be disabled for ordering).

5.9 Navigation Panel >> Order Management

- **Order Management:** This module allows the Admin to manage all the orders of the platform. Following details would be displayed here.
- **List:** All the orders received will be displayed here in list format with pagination, searching and sorting functionality.
- **Searching:** The admin can search the order details by order id, name, email id, phone .
- **Filter:** Users can filter the order on the basis of order status, user type.
- **Sorting:** Sorting options will be provided in these fields -
 - Latest to oldest by order date
 - Oldest to latest by order date
 - Name alphabetically
- Following things would be shown in list format.
 - **Order ID:** Label
 - **Order status:** Label, Status of the order would be shown here (Order Placed, In Progress, In transit, Delivered).
 - **Order date & time:** Label, date and time the order was placed.
 - **Username:** Label, (First name and Last Name of the user).
 - **User email address:** Label, email id linked to the order.
 - **User phone number:** Label, phone number linked to the order.
 - **User Type:** Label (Signed In / Not Signed In)
 - **Action Buttons:** Following action button would be shown per banner.
 - **View Details:** Button, clicking upon this “View Details” modal /page would open. Following information would be displayed here.
 - **Order Details:**
 - **Order ID:** Label
 - **Order status:** Label, Status of the order would be shown here (In progress, In transit, Mark as delivered).
 - **Order date & time:** Label, date and time the order was placed.

- **Username:** Label, (First name and Last Name of the user).
 - **User email address:** Label, email id linked to the order.
 - **User phone number:** Label, phone number linked to the order.
 - **User Type:** Label (Signed In / Not Signed In)
- **Order Summary:** Based upon the ordered items an order summary would be shown with following details.
 - **List of items:** A scrollable list view for all the products for the checkout would be shown with following details.
 - **Product Image:** Label, Primary image of the product
 - **Product name:** Label, Name of the product.
 - **Product category:** Label, Category of the product.
 - **Product Style:** Label, Style of the product (if applicable).
 - **Product Color:** Label, color of the product (if applicable).

 - At least 1 symbol.
 - Minimum 8 characters.
 - **Confirm New Password:** This will be a mandatory textbox. The admin must include the following in the new password -
 - At least 1 uppercase character.
 - At least 1 lowercase character.
 - At least 1 number.
 - At least 1 symbol.
 - Minimum 8 characters.

- The password added here must match the password added in the field above.

5.15 Notifications

- The admin will get the following notifications:
 - **Email Notifications:** The following email notifications will be sent to the admin.
 - Ordered received
 - Payment receipt
 - Order tracking link (When updated from admin side)
 - Query raised by user, via 'Contact Us' form
 - 'Contact Us' query closed

6. Cookies Storage

- The platform will use browser cookies for user authentication, session management, shopping cart persistence, and basic website functionality. A cookie consent banner will be displayed to users on their first visit. Cookie preference data will be stored and managed within the platform.

7. Conclusion

- The ESM Products platform will provide a modern and efficient eCommerce solution for showcasing, managing, and selling PPE products online. The platform will enable customers to browse products, access customer-specific pricing, place orders, make secure payments, and track their purchases through a seamless user experience. On the administrative side, it will offer comprehensive tools for managing products, categories, product variants, pricing, orders, content, reports, and customer inquiries, helping ESM Products streamline operations, improve customer engagement, and support future business growth.

8. Notes

- Twilio would be used for OTP delivery services.
- UPS would be used to fetch the delivery related information.
- GPay, Stripe would be used for payment integration.
- All product deliveries will be coordinated and fulfilled by the ESM team externally.
- All product return and refund inquiries will be routed through the Contact Us form and handled by the ESM team externally.

- If changes are made for any module or any feature, other than what is defined in this scope work, needs to be added, that will require additional development effort. These changes will be re-estimated at that time & will be shared with the client.
- Any required third-party tools/plugins / APIs will be purchased and provided by the client.
- The efforts for deployment are considered for a one-time deployment on the LIVE server only.
- Default email templates will be used; it will require additional effort to create custom email templates.
